

The key to the 'per trial' plot is shown below:

Channel #, trial # The r.m.s. at 60Hz for this trial.

Mean of all trials' 60Hz r.m.s.,
60Hz r.m.s. of the average over trials

Trials shown **red** were excluded from the across-trials average b/c an artifact was detected. NB: Artifact detection is conservative, and you may not see the artifact in this plot: detection occurs before filtering, and the artifact may have occurred outside the 350ms trace shown.

The average over trials is shown **bold**.
